## 1. Introduction

Power over Ethernet provides a way for Ethernet network devices to be powered by UTP cables, including Cat.5, 5e, and 6 rather than by separate power cords. The device is a mid-span injector that can deliver output power supporting proprietary PoE++ 90W Type 4 PDs, 802.3at Type 2 high-power PDs, and 802.3af Type 1 PDs. The injector supports both Fast Ethernet connection and Gigabit Ethernet connection.

For no damage to the connected device, it is enhanced with smart design to discover compliant PD. It shuts down the power immediately when incompliance is discovered. For safety, other protections for conditions such as disconnection, overload, over-current, and short circuit are also provided to secure your network installation. It is an ideal mid-span that supplies reliable, uninterrupted power up to 90W to IP phones, 802.11 access points, pan-tilt-zoom cameras, and other Ethernet devices using existing LAN cable infrastructure.

### 1.1 Features

- Supports both Fast Ethernet and Gigabit Ethernet
- Backward compatible with 802.3af and 802.3at-compliant PDs
- Delivers power output to support 90W PD
- Type 1 ~ Type 4 compliant PD discovery & classification
- Power shutdown protection for incompliant PD
- Power shutdown protection for disconnection
- Power shutdown protection for overload, over-current, and short circuit
- Multiple built-in power connectors to support a variety of external power supply
- Plug and play with no configuration required
- Supports DIN-rail and panel mounting

### **1.2 Product Panels**

The following figure illustrates the components of the device:

### 1.3 LED Indicators

| LED   | Function                |

## 2. Installation

### 2.1 Safety Cautions

To reduce the risk of bodily injury, electrical shock, fire and damage to the product, observe the following precautions:

| Do not service any product except as explained in your system documentation.   |  |  |
|--|--|--|
| Opening or removing covers may expose you to electrical shock.   |  |  |
| Only a trained service technician should service components inside these compartments.   |  |  |
| If any of the following conditions occur, unplug the product from the electrical outlet and replace the part or contact your trained service provider:   |  |  |
| - The power cable, extension cable, or plug is damaged.  |  |  |
| - An object has fallen into the product.   |  |  |
| - The product has been exposed to water.   |  |  |
| - The product has been dropped or damaged.   |  |  |
| - The product does not operate correctly when you follow the operating instructions.   |  |  |
| Do not push any objects into the openings of your system. Doing so can cause fire or electric shock by shorting out interior components.   |  |  |
| Operate the product only from the type of external power source indicated on the electrical ratings label. If you are not sure of the type of power source required, consult your service provider or local power company. |  |  |
| Since the product is high temperature device, install and operate the product only by authorized personnel only. Install the product at a restricted area where un-authorized persons can not reach.                       |  |  |

### 2.2 Mounting the Device to a Wall

The back panel of the device is featured a wall mount hole as follows:

### 2.3 Mounting the Device to a DIN-Rail

In the product package, a DIN-rail bracket is provided or has been installed for mounting the device in a industrial DIN-rail enclosure.

The steps to mount the device onto a DIN rail are:

1. Install the mounting bracket onto the back of the device with screws as shown below:

-12-

- 2. Attach bracket to the lower edge of the DIN rail and push the unit upward a little bit until the bracket can clamp on the upper edge of the DIN rail.
- 3. Clamp the unit to the DIN rail and make sure it is mounted securely.

The final dimension is:

### 2.3 Mounting the Device on a Panel

The device may be provided optionally with a panel mounting bracket. The bracket supports mounting the device on a plane surface securely. The mounting steps are:

1. Install the mounting bracket on the device.

2. Screw the bracket on the device.

3. Screw the device on a panel and the locations for screws are shown below:

The final dimension is:

### 2.4 Applying DC Power

### **DC Power Connectors**

The device is featured with three different DC power input connectors for supporting different types of external AC-DC power supply or AC-DC power adapters.

| DC power jack DC power DC power DIN terminal block |               |  |
|--|---------------|--|
| Connector  | Marking       | Power Supply                                   |
| Terminal Block                                     | + - PE        | General DC power supply with terminal contacts |
| DC Jack  | <b>⊘-⊙-</b> ♦ | AC-DC power adapters with DC plug              |
| Female Power DIN                                   |               | AC-DC power adapters with male power DIN       |

### **Selecting Voltage**

| Туре | PD    | DC power         | DC power  | PSE output | PD input  |
|------|-------|------------------|-----------|------------|-----------|
|      | Class | Working voltages | Min. (*1) | Max.       | Min. (*2) |
| 1    | 0     | +45 ~ 57V        | 45V       | 15.4W      | 12.95W    |
| 1    | 1     | +45 ~ 57V        | 45V       | 4W         | 3.84W     |
| 1    | 2     | +45 ~ 57V        | 45V       | 7W         | 6.49W     |
| 1    | 3     | +45 ~ 57V        | 45V       | 15.4W      | 12.95W    |
| 2    | 4     | +45 ~ 57V        | 51V       | 32W        | 25.5W     |
| 3    | 5     | +45 ~ 57V        | 55V       | 50W        | 38.7W     |
| 3    | 6     | +45 ~ 57V        | 55V       | 74W        | 52.7W     |
| 4    | 7     | +45 ~ 57V        | 55V       | 90W        | 70W       |
| 4    | 8     | +45 ~ 57V        | 55V       | 128W       | 90W       |

\*1: The minimum voltage to support the specified maximum PSE output.

\*2: The minimum power received at the PD end in worst case with the specified maximum PSE output.

| -    | <b>_</b> | <u> </u>                   | ±                     |

| 4    | 7        | +45 ~ 57V                  | 1.65A                 |
| 4    | 8        | +45 ~ 57V                  | 2.32A                 |

#### DC power input vs. PoE power output

1. PoE output voltage is about equal to DC IN voltage with a small voltage drop of 0.2V typically.

2. PoE output current maximum can be treated as a threshold of over-current event.

3. PSE output power max. ~= PoE output voltage x output current max.

4. The PoE voltage measured at the PD end may be in the range of 36 ~ 57VDC.

### **Terminal Plug & Power Wire**

A 3P flange terminal plug is provided together with the device as shown below:

Power wires: 24 ~ 12AWG (IEC 0.5~2.5mm<sup>2</sup>)

Wire length: 1 meter max.

| Pin | Marking | Power wire color | Remark   |
|-----|---------|------------------|--|
| 1   | DC+     | Red              | DC power input (+), isolated to chassis ground in circuitry              |
| 2   | DC-     | Black            | DC power input (-), isolated to chassis ground in circuitry              |
| 3   | PE      | Green            | Protective earth, Connected to chassis ground inside, Applied if needed. |

\*Contacts, DC+ and DC- are isolated with PE contact.

### 2.4.1 Power Loss

The power voltage received at the PD end over Cat.5 is different from the voltage supplied at the device's DC power connector. The voltage drop is caused by the resistance inside the device and the Cat.5 LAN cable line resistance before the power arrives PD end. The voltage drop means power loss in the path of power delivery. Here is some information for reference.

| Device resistance | 1Ω |
|-------------------|----|

Voltage drop over standard Cat.5 (Wire: 24AWG, Length: 100m)

| Current | Cable pair | Voltage drop |
|---------|------------|--------------|
| 2A      | 4          | 2V           |
| 2A      | 2          | 8.3V         |
| 1A      | 4          | 1V           |
| 1A      | 2          | 4.1V         |

Note:

1. The device (PSE) delivers the power over 4 pairs for all PD classes.

2. However, some PDs might use 2 pairs only in receiving PoE power. Refer to each PD's documents for details.

## 3. Making LAN Connections

### 3.1 Data In Jack

The RJ-45 jack is used to connect a PoE-incapable Ethernet device that communicates with the remote powered device. The injector operates transparently to Ethernet port functions like auto MDI/MDI-X function and Auto-negotiation function. The network signal is forwarded to PoE OUT jack.

It supports: Ethernet interfaces 10BASE-T, 100BASE-TX, 1000BASE-T

#### **Network Cables**

| 10BASE-T:   | 2-pair UTP Cat. 3, 4, 5 , EIA/TIA-568B 100-ohm                            |
|-------------|---|
| 100BASE-TX: | 2-pair UTP Cat. 5, EIA/TIA-568B 100-ohm                                   |
| 1000BASE-T: | 4-pair UTP Cat. 5 or higher (Cat.5e is recommended), EIA/TIA-568B 100-ohm |

### 3.2 PoE OUT Jack

The RJ-45 is enabled to deliver power together with network signal to a connected powered device via Ethernet cable. To make a IEEE standard PoE connection, the connected PoE PD must be IEEE 802.3at or IEEE 802.3af-compliant device for safety reason. For proprietary PoE++ PD classes, only the PDs in certified list are supported the injector.

#### Network cable for PD connection

4-pair Cat.5, 5e, 6 or better No bundled cable for proprietary PoE++ classes No 2-pair cable

#### **Safety Features**

The injector is equipped with the following capabilities for a safe and reliable connection:

- 1. Detection for an IEEE 802.3af /802.3at/Proprietary PoE++ compliant PD.
- 2. No power is supplied to a device which is classified incompliant PD.
- 3. No power is supplied when no connection exists on the port.
- 4. The power is cut off immediately from powering condition when a disconnection occurs.
- 5. The power is cut off immediately from powering condition when overload occurs.
- 6. The power is cut off immediately from powering condition when over-current occurs.
- 7. The power is cut off immediately from powering condition when short circuit condition occurs.

### **3.3 Connection Distance**

#### **Connecting standard PD**

The following figure illustrates a typical application of the device connecting to a standard PD.

The cable distance including the segment from the injector to the Ethernet device and the segment to PD is no more than 100 meters.

#### **Connecting PoE splitter**

The figure below illustrates another example that the device connects to a PoE splitter for a non-PoE device. A PoE splitter operates as a PD that splits PoE input to pure power line and separated LAN interface.

### **3.4 LED Indication**

| LED   | State | Interpretation                          |
|-------|-------|---|
| OFF   |       | No power is supplied on DC power input. |
| DC IN | ON    | DC power is supplied.                   |
| PoE   | OFF   | PoE output is shutdown.                 |
| POE   | ON    | PoE power is delivered.                 |

## 4. Supporting Products

### **Power Supplies**

| PA-48V-0.75A/U | AC-DC power adapter with 48V 36W output for USA              |
|----------------|--|
| PA-48V-0.75A/E | AC-DC power adapter with 48V 36W output for Europe           |
| L02-0001-031   | AC-DC power adapter with 48V 90W output                      |
| KPW-300T-48    | AC-DC Power supply for PoE/PoE+ with DC48V output up to 300W |
| KPW-300T-52    | AC-DC Power supply for PoE/PoE+ with DC52V output up to 300W |
| KPW-300T-54    | AC-DC Power supply for PoE/PoE+ with DC54V output up to 300W |
|                |  |

### **PoE Splitters**

| KPW-T2P25-5V  | IEEE 802.3at Type 2 PoE splitter with 5VDC power output up to 25W  |
|---------------|--|
| KPW-T2P25-9V  | IEEE 802.3at Type 2 PoE splitter with 9VDC power output up to 25W  |
| KPW-T2P25-12V | IEEE 802.3at Type 2 PoE splitter with 12VDC power output up to 25W |
| KPW-T4SP      | IEEE 802.3af, 802.3at & PoE++ Splitter with DC output 90W or more  |
| KPW-D48T12-60 | Isolated 48V-12V 60W DC-DC converter for KPW-T4SP                  |
| KPW-D48T12-90 | Isolated 48V-12V 90W DC-DC converter for KPW-T4SP                  |
| KPW-D48T24-60 | Isolated 48V-24V 60W DC-DC converter for KPW-T4SP                  |
| KPW-D48T24-90 | Isolated 48V-24V 90W DC-DC converter for KPW-T4SP                  |
